Neurodevelopmental Support Systems: Dandle ROO Lite™

Cost effective, disposable Dandle ROO Lite can be used with or without phototherapy!

Soft, stretchy cotton allows freedom of movement while keeping the baby in flexion

Creative use of the ROO Lite for a baby who needed more exposed skin surface under phototherapy lights

- Made from soft, stretchy cotton, not paper or polyester
- Lightweight material allows at least 70% of phototherapy light to penetrate through a single layer
- May be hand laundered or just thrown away if laundry facilities are not available!
- Modular ROO accessories can be added to meet your needs
  - Add adjustable brim to help shield eyes from direct light
  - Add multi-purpose roll as a prone roll or supine support to bring hips into a posterior tilt
  - Add gel pillow and cotton cover for a soft supportive surface
- Adjustable micro-fasteners provide secure support
- Upper and lower extremities can be adjusted independently of each other and may be individualized according to the baby's medical or developmental needs
- Headroll may be fastened out of the way to accommodate and/or support medical equipment
- Think creatively!! Use for admissions, "messy" procedures, eye exams, hearing screens, during transport, for agitated babies during phototherapy and any time a baby would benefit from containment or calming!
